

# ENTERPRISE MOBILITY

Mobility becomes the foundation of all business activity – a routine part of the connected corporate. Businesses are required to expand quickly into new mobile practices and to drive high-value mobile experiences which are derived from evolving new devices and services. For that, COMMUNITAKE's Enterprise Mobility goes beyond assets and policies management functions into the realm of Total Mobility, which is a powerful combination of device and applications management, secure communication, collaboration, automated issue resolution and remote device control.

## CAPABILITIES

### DEVICE MANAGEMENT

COMMUNITAKE views and manages all your business related devices, the device attributes, the device branded display, the device users and the device connectivity to your enterprise network and content. Defines device settings over the air and enforce compliance to your mobile policies.

### APPLICATIONS MANAGEMENT

COMMUNITAKE defines prohibited on-device applications, mandatory on-device applications and the enterprise application catalog. Defines prohibited applications via blacklisting or more restrictive kiosk mode. Performs dynamic mass distribution of new and updated applications and tracks and monitors compliance to the application policies.

### SECURITY MANAGEMENT

COMMUNITAKE sets flexible password policies; controls the access to business resources; controls browser use; and restricts mobile device services. Performs data recovery actions from afar: locates the device; activates the device alarm; locks the device; wipes on-device data completely or selectively; backups and restores data. Define launcher settings with access to only specific services.

### BRING YOUR OWN DEVICE (BYOD)

COMMUNITAKE supports all models of device ownership. Differentiates the use of applications, web browser and mobile services, based on the device time and location. Protects users' privacy by limiting the data collection from privately owned devices.

### CONTAINERIZATION

COMMUNITAKE secures the access to business data while maintaining the native user experience. Applies two deployment options: (1) view only of files that reside in Microsoft SharePoint and Microsoft 365 ; ( 2) secure access to the business email server, SharePoint files, contacts calendar and web applications; allow files editing and saving inside the secure container.

### USAGE CONTROL

COMMUNITAKE monitors in near real-time the mobile usage levels of calls, messages and data – both for local and roaming use. Sends alerts on exceeded usage and eliminates bill shock resulting from careless usage.

## SAFE DIALOG

COMMUNITAKE delivers messaging between enrolled devices inside a secure container. Messages are visible only to enrolled and properly managed devices. When a device is unenrolled, all messages are deleted along with the container.

## DIAGNOSTICS AND REPAIR

COMMUNITAKE provides device holders with an on-device application that seamlessly tests the device and performs auto repair actions to optimize use everywhere and anytime.

## REMOTE SUPPORT & COLLABORATION

COMMUNITAKE enables IT staff to remotely control a device and provides efficient and effective support as if they are holding the device in their hands. Mobile workers can share their device with others for guidance.

## VALUE

# 1

### SMART AFFORDABLE AND EASY TO SETUP DEVICE MANAGEMENT

- ▼ Simplifies management via an intuitive GUI requiring minimal IT knowledge
- ▼ Defines policies via one-and-done definitions - not by operating systems silos
- ▼ Performs dynamic mass distribution and avoids complicated campaigns
- ▼ Delivers best value, best priced enterprise mobility solution

# 2

### SEAMLESS MOBILITY AND PRODUCTIVITY

- ▼ Locks down devices for generating higher focus on work tasks
- ▼ Manages BYOD in an intuitive easy method
- ▼ Integrates device takeover to allow always connected professionals
- ▼ Eliminates redundant usage and saves on expenditures via a granular control

# 3

### HIGHLY SECURE COMMUNICATION AND CONTENT

- ▼ Secures access to organizational content and email
- ▼ Maintains sensitive messaging inside a contained environment
- ▼ Prevents data leakage via internal remote support practices

## TECHNOLOGY

- ▼ COMMUNITAKE supports Android (2.3+), iOS (5.0+), WP (8.1+) (Note: features vary by the operating system).
- ▼ Cloud based solution or on-premises deployment along with White-label branding.
- ▼ Multi-tenant, highly scalable and redundant architecture.

COMMUNITAKE delivers a comprehensive Mobility platform that unifies robust multi-channel support with highly secure device, smart Enterprise Mobility Management, and core Android Internet of Things. The CommuniTake solutions suite (1) turns support to be the hallmark of a successful service provider; (2) manages mobile resources, processes and security to effectively operate business mobility; (3) enables complete wiretapping protection for mobile devices; (4) and facilitates seamless performance for connected Android machines. CommuniTake proven success features superior technology; advanced functionality; flexible delivery methods; and white label models. CommuniTake products are deployed by foremost operators and businesses worldwide.
