

toolstar®shredder OS/LX
provided on USB flash drive

Press commentaries

„The irreversible data erasing as required by the Federal Office for Information Security (BSI) is a core competency of the Asset Recovery Center in Mainz, Germany. All known standards are matched. Additionally the data erasing and harddisc drive destroying is surveyed by the TÜVSüd, Germany. Hence Geodis guarantees its customers a maximum of safety for its company data.“
IT-Business – Geodis user report

Security standards

- **BSI Standard** (Federal Office for Information Security (BSI), Germany)
- **BSI VS** (BSI, Germany)
- **DoD 5220.22M** (Department of Defense, USA)
- **DoD 5220.22M extended** (Department of Defense, USA)
- **AR380-19** (US-Army)
- **AFSSI 5020** (US-Air-Force)
- **Peter Gutmann's methods**

toolstar®shredder is available both self booting (OS/LX) and for Windows®.

All versions delete data meeting the above mentioned standards. Personal settings for the erasing process are possible, too. A log file of the erasing process is also created by the program.

toolstar®shredder OS/LX (self booting) erases whole hard discs and USB flash drives.

Furthermore **toolstar®shredder WIN** deletes partitions, directories, files and unused hard disc sectors. Several hard disc drives can be erased simultaneously as well.

toolstar®shredder OS/LX

toolstar®shredder OS/LX erases the content of your hard disc drives definitely

- self booting - no matter what operating system and file system
- matches all national and international standards
- comprehensive erasing log files
- all processes automatable
- testing, erasing and logging in one step

Nowadays hard disc data must be protected in a better way than paper documents, because they can be analysed and copied more easily. The same applies to the disposal. Beyond that the law requires the enhanced erasing in the "Federal Law for Data Protection" since May 2001. toolstar®shredder OS/LX offers you the possibility, to erase your hard disc data safely and most notably verifiably.

Your benefits from toolstar®shredder OS/LX

- Erases all data stored on a hard disc safely and irretrievably.
- Self booting and equipped with its own operating system for general-purpose usage.
- Deletes all fragments of old installations.
- Deletes boot sector and partition sector viruses.
- Meets international security standards.
- All erasing processes are documented clearly and in written form.
- Guarantee of data security when buying and selling used PCs.
- Testing an erasing is possible in one step.

NEW: Now available for Microsoft® Windows®! Windows-based data wiping means that separate files and directories can be erased without touching the operating system or other programs. The reinstallation of the operating system or any programs is not necessary. This program version erases intermediate free disc space as well. Thus the safe and final erasure of already deleted data is guaranteed. Data erased by using the Windows® feature „delete“ can be easily recovered. These fragments are irreversibly destructed by toolstar®shredder. Thus no one can recover already deleted data as e. g. letters, pictures etc. This process should be run regularly on any PC.
