

toolstar®test LX on USB flash drive

### Press commentary

"... in the professional segment, is such a professional solution, a must-have. With this diagnostic-tools, you can find even difficult errors. Easy once are found faster..."

**ChannelPartner, opinion of the editor**

"Over an eight hour day long, you can save up to 72 minutes per workplace."

**IT-Business – credentials Geodis**

"The **toolstar®KIT** is an extensive collection, which can be used even at dead PCs. The contained tools cover all possible application areas optimal and complement one another."

**c't - „very good“**

"The use of software-based diagnosis relieved technicians, shortening lead times and increasing the quality of error finding. So the costs are reduced, at the same time, the conversion increases."

**Technical Director, Expert Bening**

"... Because your software has become an integral part of my Computer Services, a great thing."

**Point of Service**

"The test results are excellent I want to allow myself and on behalf of my colleagues, to congratulate..."

**Quality assurance, Geodis Germany GmbH**

### Extensions (for port- and drive-tests)

Test plug and test media for toolstar®test WIN/LX/analyser

### toolstar®techpack

Bidirektionale Teststecker + Test-CD + DVD

- Test plug serial COM for bidirectional port tests
- Check quality of data transmitting
- Test CD + test DVD for optimal reading tests

# toolstar®test LX

The test software with Linux Power

- Self-booting, independent of the operating system
- Complete tests of all important components
- Burn-in tests will find even intermittent errors
- Tests with up to 100% system strain
- Up to 6 tests simultaneously
- Detailed protocols will certify your work
- Internal and external network tests
- Freely configurable for individual usage
- Regular updates for your safety
- Bootable from flash drives and DVDs

**toolstar®test LX** is a self-booting test software, that tests every computer, independently of the installed operating system, reliable for errors. To find occasional errors, freely configurable burn-in tests are available with which you can test all components of PCs, server and notebooks directly and accurately for errors. All results will be written into a protocol, that you can set up as you wish. So that your investment pays off in the future, we will update **toolstar®test LX** every two to three months. Besides new hardware components, new tests will also be implemented to make your work easier.

## Your advantage with Toolstar test LX

- You test independently of the installed operating system (Windows, Server, Linux, without an operating system, Mac, OS-X, ...)
- You save money and time at the support
- Your support will be efficient and calculable
- Save your test-protocols on USB or LAN
- Your appearance at the customer's place looks professional
- Test results are retrievable at a central server
- Enormous time savings in case of intermittent errors
- You have an optimal tool for your technical support
- You can implement and use your own Linux tools and drivers
- Linux servers can be tested in the background
- No unnecessary changing of components
- No more "trial and error"

## Tests in summary

Seven memory tests, SPD EEPROM, simultaneous tests for up to 512 CPUs, Cache, main memory and hard disk, individually configurable burn-in tests, test for CDs, DVDs and USB ports, several write, read and mechanic tests for hard disks, ports (serial, parallel, USB) with optional USB plug, tests for keyboard, mouse, mainboard, CPU, graphics and graphics memory test. It recognizes the newest hardware and processors.
